Sury,

Per your request, I have incorporated comments for the in vitro animal studies. In doing so, I have:

- Added summary statements for each subsection and added an overall/grand summary paragraph
- Trimmed the text, particularly for Craft et al., 1987
- Edited for abbreviations and grammar where possible

Prior to starting my work with this section, I accepted the existing track changes. Any new text that I added today is in track changes. Please note that I added a few new comment bubbles. I also kept a few old comment bubbles in which I placed some commentary (in bold italics).

If I missed anything or if I can be of further assistance, please let me know. Otherwise, I will turn my attention back to reviewing the toxicokinetics section.

Brian

Hi Brian,

Here is the version Raghu worked for the in vitro mammalian studies. I marked the comments.

Make sure we have a summary statement for each sub section and a grand summary for the in vitro section. Also, check for any abbreviations or minors editorial stuff and fix them. If possible trim the text getting the message across.

Remember, Craft et al study was pointed out by NAS to minimize the text.

Try to shoot for the end of the day today.

Sury
